THE ECLIPSE OF THE CENTURY

JULY 31 - AUGUST 5 2027

Experience Totality with Professor David Block
Estepona, Spain

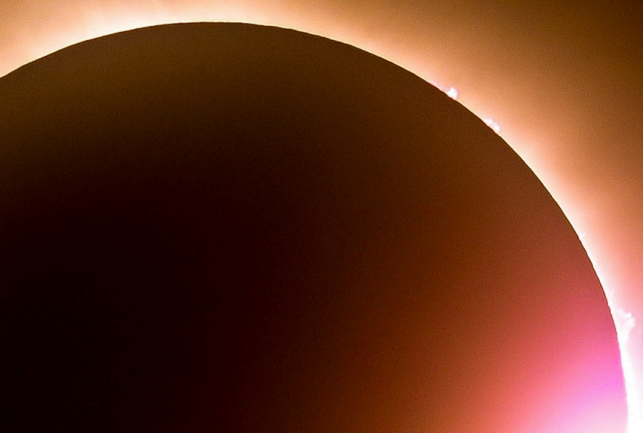

IMAGINE THIS...

For approximately 3 minutes and 40 seconds on August 2, 2027, the brilliant Spanish morning will be transformed as the Moon completely covers the Sun. Your eyes perceive the extraordinary solar corona — normally invisible, revealed for those few precious minutes when the Moon performs its greatest celestial marvel.

This is not simply an eclipse.

It is an experience you will remember for the rest of your life.

And you can experience it in Estepona, on Spain's magnificent Costa del Sol, in the company of Professor David Block, astronomer, author and passionate communicator of the wonders of the universe.

WHY ESTEPONA?

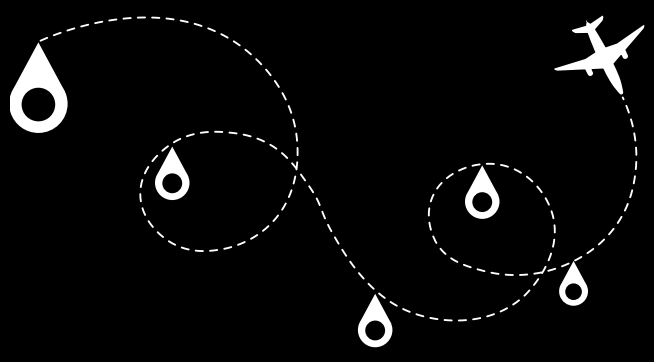

Estepona offers something very special for an eclipse expedition.

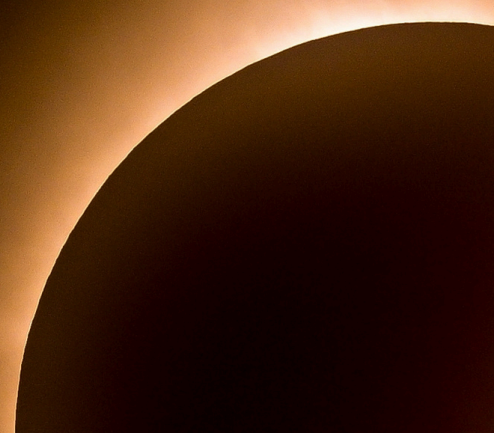

1. The expected cloud cover is very low: approximately 92% cloud free.
2. It is a beautiful Mediterranean town rather than a remote eclipse outpost. Its historic centre is filled with whitewashed buildings, flower-filled streets, cafés and restaurants, while the seafront stretches along the Mediterranean with views towards Gibraltar and North Africa.

And then there is the sea.

Our base is designed to make the eclipse experience as comfortable and memorable as possible — with a sea-facing Junior Suite, giving you the opportunity to enjoy the Mediterranean setting before and after this cosmic wonder.

- This is astronomy without hardship.
- No desert heat.
- No rushing from one remote location to another.

THE GREAT MOMENT

On the morning of Monday, 2 August 2027, the Moon's shadow will sweep across southern Spain. From Estepona, the eclipse reaches totality at approximately 10:46 a.m., with maximum eclipse shortly after 10:48 a.m.

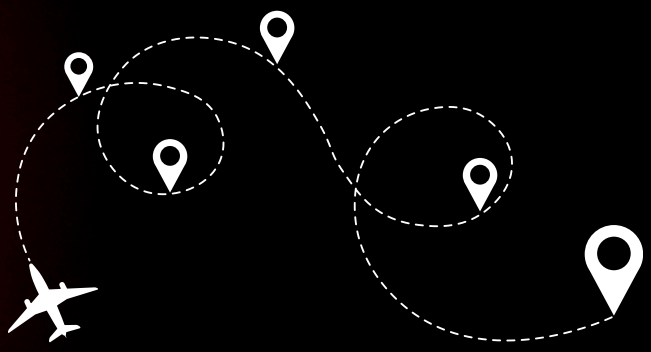

And the geometry is remarkably favourable. At maximum eclipse, the Sun will be approximately 39° above the horizon — high enough to avoid the problems associated with low-altitude eclipses, yet low enough to provide wonderful possibilities for photography and composition.

For more than three minutes, you will have time to look, photograph, absorb and simply be there:

- The diamond ring.
- The disappearance of the brilliant solar photosphere.
- The sudden darkness.
- The corona streaming outward from the black Moon.
- The strange twilight surrounding the horizon.

And then, suddenly, the first brilliant flash as sunlight returns.

- Totality is over.
- But the memory will not be.

THE ECLIPSE WITH PROF DAVID BLOCK

This is not intended to be an ordinary holiday with an eclipse added to the itinerary.

It is an opportunity to experience the eclipse with an astronomer who has spent a lifetime looking upward.

In two lectures at the hotel in Estepona, Professor David Block will share his knowledge of the Sun, Moon and the cosmos, explain what is happening as the eclipse unfolds - but moreover, he will guide his group participants as to how to safely photograph a solar eclipse without retinal damage.

And for those who simply want to witness it, there is no requirement to be an astronomer or photographer.

You only need to look up!

TOUR DETAILS

- Estepona, Costa del Sol, Spain
- Sea-facing Junior Suite at a luxury, 5-star hotel in Estepona.
- Breakfast, lunch & dinner included.
- Only 8 Junior Suites are available.

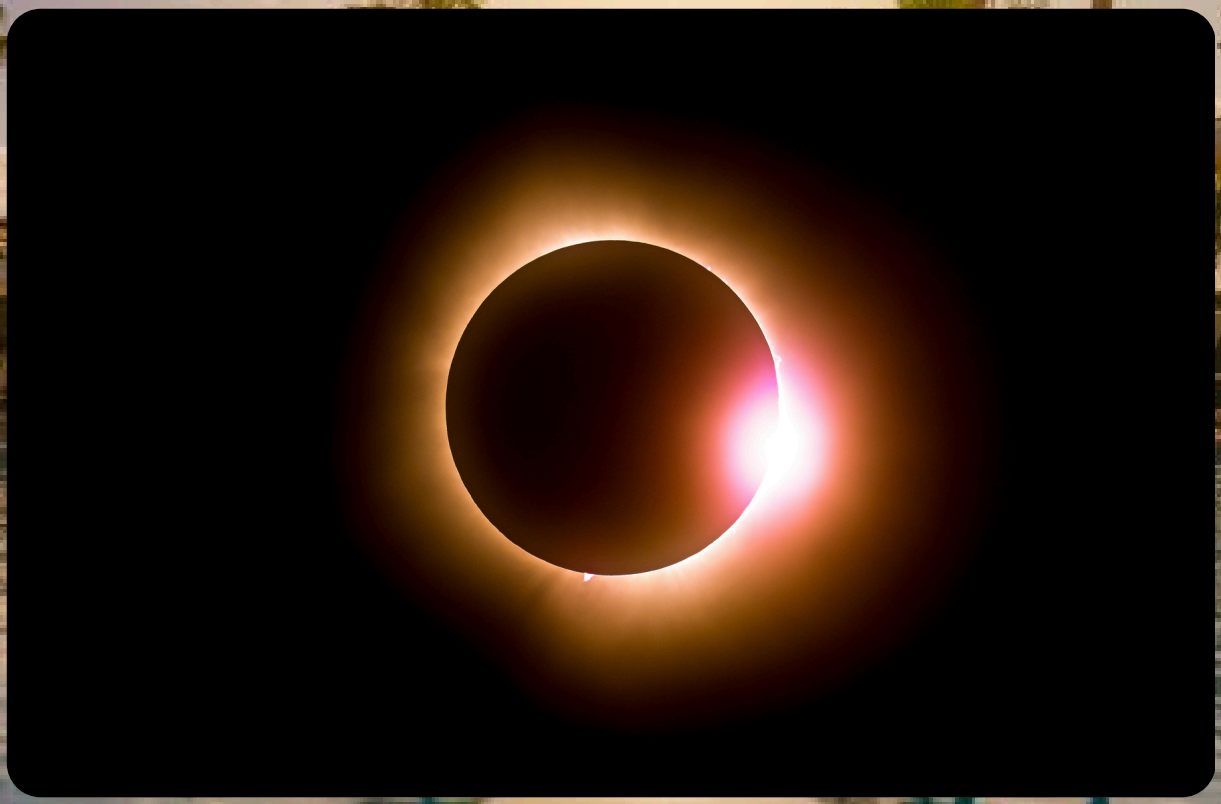

PRICING & BOOKING

€4,800 per couple*

Participants are required to pay a non-refundable deposit of €800 per person upon formal registration.

*Excludes flights, drinks & taxi costs
